

*Specialist for Pumping Technology*

## **SPARES & SERVICE**

**RDP** Reciprocating Plunger Pumps  
acc. to API 674 & ISO 13710

# SPARES

We know our product performs a critical function for your business.

Our pumps are designed and built to exacting standards that will provide years of reliable service in even the most challenging applications. So it makes sense to use Original Manufacturer spares and service to protect your investment.

It's reassuring to know that our product commitment only starts with the sale. Ruhrpumpen UK Ltd is the global focus for the RDP range of reciprocating pumps. We not only design and manufacture new API 674 pumps but also offer a full range of spares / service support for all our products, including those that continue to provide reliable service in the field. We are your first and only source for Original Equipment Manufacturer (OEM) quality parts.

## SAFEGUARD YOUR BUSINESS

- Guaranteed to Fit
- Guaranteed to Perform
- Guaranteed to Last

All RDP components are made to our original drawings and exact tolerances. They are cast using our own foundries in original materials, receive the correct process treatments, and are fully tested and warranted for defects. Our parts guarantee that your equipment will return to service in the best condition... ready to continue years of reliable operation.

## NO PUMP IS OBSOLETE

Even if your pump has long been out of production, why replace a reliable performer if you can refurbish? We have records reaching back to some of our very first plunger pumps delivered. As many of our products have short production runs, new parts can be made very competitively.

Not only that, if your pump is not documented, our service team can inspect, measure and produce spares to keep your pump in operation.

## SERVICE

Our ability to supply OEM spares for every product operating in the field is only part of the story...  
...the other is our ability to support it anywhere in the world.

Onshore, offshore, on site, in-house... our engineers are qualified and experienced to provide technical assistance when and where ever it is required. Our site engineers receive helicopter training and medical approvals that are continually renewed to enable them to work in the offshore environment.

Count on us as though we are part of your engineering team. Many pump problems can be caused by site or process conditions changing or not meeting specification. Our troubleshooting service is only a phone call away and will often resolve issues with minor adjustments, without the necessity to visit site.

Our services include minor maintenance to major overhaul conducted on site. Customers can also take advantage of our "good as new" total refurbishment or pump modification that we can conduct at our manufacturing facilities in the UK and Germany.

## TRAINING

Another aspect of support often overlooked is training. Let your staff receive the benefit of the experience of Ruhrpumpen Engineers.

We run courses at our own facilities or at your site at your convenience.

### RUHRPUMPEN AT A GLANCE

- More than 65 years creating pumping technology
- The most flexible business structure of the marketplace
- Global manufacturing capability
- Over 2,000 employees
