

70 years developing the pumping technology that moves our world

Sump pumps are vertically suspended single casing pumps with separated discharge, semi open or enclosed impeller designed for wet pit applications. They are designed to provide dependable, economical drainage service on medium capacity installations in commercial buildings and general industrial applications.

Construction

- Bronze bottom/intermediate line shaft bearings
- Cast Iron Semi-open impeller
- Carbon steel for column and discharge
- High thrust, angular contact ball bearing
- Grease lubricated pump and line shaft bearings
- 12% chrome shaft
- Steel round or square mounting plates
- External impeller adjustment
- Customized pump length up to 20 feet
- Flanged discharge on all casings
- Cast iron motor support
- Standard C face motors

Our new quick ship program will cover all sizes listed below in full cast iron construction!
