

Stay Genuine, Stay Ruhrpumpen

The most extensive inventory of genuine spare parts for oil and gas pumps.

Ruhrpumpen offers superior quality OEM spare parts for all our centrifugal and reciprocating pump models engineered to API standards. Our original spare parts ensure the usual operating reliability of your pump as they are produced with the same machines and precision as new products. As the Original Equipment Manufacturer, Ruhrpumpen knows the design and manufacturing specifications of all its current and heritage pump ranges.

Avoid unwanted downtime, unnecessary repairs and equipment failure... choose RP Original Spare Parts!

Why undermine the quality engineered into each of our pumps with the use of dangerous replicated parts? Using a non-genuine shaft sleeve can put your process at risk due to vibration, leaks and reduced reliability. The smallest deviation from the required specifications can lead to mechanical seal leakage with potential impact on safety, environment and equipment integrity.

Why choose RP spare parts?

- **Reliability** – By using original pump spare parts, you can avoid system failures that are dramatically increased when using non-OEM components. You are endangering your machine, your operation, and even your personnel when using a part produced by a replicator.
- **Precise Tolerances** – Even the slightest variance can generate significant inefficiencies for your pump. Unlicensed fabricators do not follow the standards upheld at our manufacturing facilities and cannot duplicate the tolerances designed into our pumps. Our machine shop counts with certified manufacturing metrology and measurement assurance programs that ensure the reliability of the part.
- **ISO Certification** – RP spare parts are manufactured in ISO certified facilities and backed by a full factory warranty and certificate of origin.
- **Material Selection** – Our team of engineers ensures that the proper material is selected for your application. RP spare parts are machined using advanced metallurgies and are custom engineered to fit each specific machine.
- **Competitive Price** – When you select original spare parts for your equipment you ensure an improved total cost of ownership for your pump. Ultimately, while you may save money up front on a pirated impeller design, you will spend that cost differential (and so much more) on repairs and increased energy consumption.

We provide a full range of spare parts and components, including:

- Casings
- Casing covers
- Bearing Housings
- Bearing Covers
- Couplings
- Impellers
- Shafts
- Shaft sleeves
- Impeller Wear Rings
- Case Wear Rings
- Keys
- Bearings
- Lip Seals
- Labyrinth Seals
- O-rings
- Gaskets

The right parts, in the right place, at the right time

Ruhrpumpen makes it easy to do business. We offer the best before, during and after sale support. Our OEM parts and components are available through our global network of manufacturing facilities and service centers. In this way, we ensure high availability and fast delivery of wear and spare parts anywhere in the world.
